

PROFESSIONAL SUMMARY

Computer Science graduate and Full-Stack Developer who has designed, built and deployed six web applications end to end, including an Arabic services marketplace. Builds production applications with React, Next.js and Node.js - real JWT + bcrypt authentication, a real PostgreSQL or MongoDB database, and server-side logic that validates and recomputes data instead of trusting the client. Owns features from schema and REST API through typed React UI, tests and deployment.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL
Front End	React 19, Next.js 16 (App Router), React Router, Redux Toolkit, Context API
Back End	Node.js, Express 5, REST API design, JWT & bcrypt auth, role-based access
Databases	PostgreSQL (Drizzle ORM), MongoDB (Mongoose), schema & data modelling
Styling	Tailwind CSS, Sass, CSS Modules, Bootstrap, Responsive & RTL design
Testing & Tools	Vitest, Testing Library, Git & GitHub, Vite, Vercel, serverless deployment

EXPERIENCE

Independent Full-Stack Developer / Self-directed projects, RemoteSep 2025 - Present

- Designed, built and deployed 6 web applications end to end - an Arabic services marketplace, three storefronts, an analytics dashboard and a marketing site - from planning through deployment.
- Built responsive, mobile-first interfaces with React and Next.js, including Arabic (RTL) layouts alongside English.
- Applied production practices throughout: server-side validation, JWT auth with role-based access, rate limiting, security headers and automated tests.

SELECTED PROJECTS

Bannaa / Arabic Services Marketplace↗ Live Demo | Code

- Built an Arabic RTL marketplace for building-materials stores and technicians - search with filters and pagination, service requests, reviews, owner and admin dashboards, photo uploads to Vercel Blob and in-app notifications.
- Enforced ownership rules on every server action (owners can only change their own listings and requests), plus rate limits, hashed single-use password-reset links and session revocation - covered by 81 integration tests on real Postgres.

Tech Stack: Next.js 16 | TypeScript | PostgreSQL | Drizzle | Tailwind | Vitest

Dar Al-Asalah / Arabic (RTL) E-Commerce Store↗ Live Demo | Code

- Shipped an Arabic RTL storefront end to end - Express 5 REST API, MongoDB/Mongoose models, JWT + bcrypt auth, and a typed React 19 front end.
- Built a checkout that recomputes order totals server-side, blocking client-side price tampering, plus a role-gated admin dashboard for products and orders.

Tech Stack: React | TypeScript | Node.js/Express | MongoDB | JWT

Auratech Store / Premium E-Commerce Storefront↗ Live Demo | Code

- Built a Postgres-backed storefront on a Drizzle ORM schema, served through serverless API functions with httpOnly-cookie JWT sessions.
- Added server-resolved search, filtering and sorting, a persistent cart and route code splitting; covered by a Vitest suite.

Tech Stack: React 19 | TypeScript | PostgreSQL | Drizzle | Vitest

NexaCommerce / Full-Stack MERN Marketplace↗ Live Demo | Code

- Built a marketplace as a TypeScript monorepo - Next.js 16 storefront, Express REST API and MongoDB Atlas - on Vercel Functions.
- Hardened it for production with rate limiting, security headers and CORS, verified by dedicated security test suites.

Tech Stack: Next.js | Node.js | Express | MongoDB Atlas | Redux Toolkit

EDUCATION

B.Sc. in Computer Science
Sinai University | Graduated 2026

LANGUAGES

ArabicNative
EnglishB2 - Upper Intermediate

CERTIFICATIONS

Front-End Web Development (HTML, CSS, JavaScript)

Information Technology Institute (ITI) | May 2025

Open to Full-Stack and Front-End Developer roles.
